

How large was Noah's ark?

How could someone back then build such a big ship?

How did Noah round up all the animals?

How could all the animals fit on the ark?

How would dinosaurs fit if they were so huge?

How can we be sure the flood covered the whole world and not just where the ark was?

Why is the rainbow important?

Is there scientific evidence of a worldwide flood?

Doesn't it take millions of years for fossils to form?

What happened to the dinosaurs after the flood?
